

There are many screen recording tools available. The instructions below use a free web version and YouTube. If you have alternative software to record your screen and upload it to YouTube, please feel free to use this.

Creating screencasts to use in your e-portfolio

You will need a YouTube account to include screencasts in your e-portfolio. All your videos will be “Unlisted” on YouTube.

Step 1 – In a web browser such as Google Chrome, load the website **screencast-o-matic.com**

Step 2 – Click the button **Start recording for free**

Step 3 – Click the button **Launch Free Recorder**. This will download a WeblaunchRecord.exe. Once it is downloaded, run this file. This will download the required files and start the screen recording tool.

Step 4 – Press the red button “**Rec**” and record the demo of your system. Then click **Done** when you are finished. Pick the option **Save/Upload** in the pop-up window that appears. Now select “**Upload to YouTube**” in the pop-up window in the bottom right-hand corner or save the video file as an .MPG file and upload this into your YouTube account. **You need to select the option “Unlisted” when you add the video to YouTube.** This way, the video is not public, but you can share the video on your e-portfolio.

Step 5 – Load the video on YouTube. Then click the **SHARE** option and select **Embed**.

Step 6 – Copy the HTML code that appears (this will be an iFrame).

Step 7 – Now load the page in your e-portfolio in CANVAS that you want to include the screencast in.

Step 8 – Click “Edit this page” and select the HTML/embedded content option. Now paste the HTML iFrame code from YouTube and save the page. The video screencast should now appear in your e-portfolio.
